# UPROSZCZONY PLAN URZĄDZENIA LASU

DLA LASÓW NIESTANOWIĄCYCH WŁASNOŚCI SKARBU PAŃSTWA

NALEŻĄCYCH DO OSÓB FIZYCZNYCH

Obręb ewidencyjny **ŻARNÓWKA**

Województwo **Małopolskie** Powiat **Suski** Gmina **Maków Podhalański** Obszar wiejs

Na okres 01.01.2026 r. -31.12.2035 r.

## I Zestawienie powierzchni

Według stanu na 13.02.2025 r.

Ogólna powierzchnia opracowania ..... **783,4846 [ha]**

W tym:

1) Powierzchnia leśna zgodna z ewidencją gruntów i budynków [ha] ..... **783,5846 [ha]**

Powierzchnia lasów [ha] ..... **783,4846 [ha]**

Według grup kategorii użytkowania

- Gruntów zalesionych..... **781,9909 [ha]**

- Gruntów niezalesionych..... **1,1619 [ha]**

W tym: do odnowienia ..... **0,0000 [ha]**

- Gruntów związanych z gospodarką leśną [ha] ..... **0,3318 [ha]**

2) Powierzchnia gruntów spełniających wymogi ustawy o lasach

a nie ujętych w ewidencji gruntów i budynków [ha] ..... **0,0000 [ha]**

3) Powierzchnia gruntów przewidzianych do zalesienia [ha] ..... **0,0000 [ha]**

## II Zestawienie zadań na lata od 01.01.2026r. do 31.12.2035r.

### II.1 POZYSKANIE DREWNA W ILOŚCI NIE WIĘKSZEJ NIŻ

- 1) Etat cięć w użytkowaniu rębnym

**30283** m<sup>3</sup> grubizny brutto (**26699** m<sup>3</sup> grubizny netto)

- 2) Powierzchniowy etat cięć w użytkowaniu przedrębnym ..... **590,1407** [ha]

o orientacyjnej miąższości:

**30828** m<sup>3</sup> grubizny netto

### II.2 PIELĘGNOWANIE LASU

Na powierzchni..... **592,9161** [ha]

W tym:

- 1) Pielęgnowanie zainwentaryzowanych upraw..... **0,7049** [ha]

- 2) Pielęgnowanie zainwentaryzowanych młodników..... **2,0705** [ha]

- 3) Trzebieże ..... **590,1407** [ha]

### II.3 POZOSTAŁE ZADANIA OKREŚLONE KIERUNKOWO DOTYCZĄCE ZALESIEŃ I ODNOWIEŃ

- 1) Zalesienie gruntów przeznaczonych do zalesienia ..... **0,0000** [ha]

- 2) Odnowienie halizn, płazowin i zrębów ..... **0,0000** [ha]

- 3) Orientacyjna powierzchnia odnowień drzewostanów  
Przewidywanych do użytkowania rębnego..... **65,0029** [ha]

w tym zrębami zupełnymi..... **0,0000** [ha]

# 1 OPIS OGÓLNY

## 1.1 Nadzór

Nadzór nad gospodarką leśną, w chwili sporządzenia UPUL sprawuje Starosta Suski.

## 1.2 Powierzchnia

Ogólna powierzchnia opracowania wynosi **783,4846** ha

W tym powierzchnia lasów i gruntów leśnych wg ewidencji wynosi **783,5846** ha

W opracowaniu ujęto:

Tab. 1 Zestawienie powierzchni w rozbiciu na rodzaje

| Powierzchnia<br>[ha] | Rodzaj powierzchni                                                                                                 |
|----------------------|--------------------------------------------------------------------------------------------------------------------|
| 783,5846             | Powierzchnia lasów zgodnych z ewidencją gruntów i budynków                                                         |
| 0,0000               | Powierzchnie spełniające wymogi ustawy o lasach o uznaniu za grunt leśny a nieujęte w ewidencji gruntów i budynków |
| 0,0000               | Grunty przewidziane do zalesienia                                                                                  |

Zmiany powierzchni leśnej zamieszczono w załączniku „Wykaz rozbieżności powierzchni leśnej” w celu skorygowania rodzaju powierzchni w ewidencji gruntów i budynków.

## 1.3 Struktura własności

Powierzchnia leśna wynosząca **783,4846** ha należy do:

Tab. 2 Struktura własności

| Formy własności                                    | Liczba działek<br>[szt.] | Powierzchnia<br>[ha] |
|----------------------------------------------------|--------------------------|----------------------|
| Właściciele indywidualni                           | 3562                     | 770,8679             |
| Inni właściciele, formy własności i współwłasności | 16                       | 12,6167              |

## 1.4 Warunki przyrodnicze

Lasy objęte uproszczonym planem urządzenia lasu położone są w:

Krainie: VIII-Karpacza

Mezoregionie: VIII-10 Beskidu Makowskiego

Dla obszaru całej gminy przyjęto następujące typy drzewostanów oraz ramowe składy odnowień dla wyodrębnionych podczas inwentaryzacji siedliskowych typów lasu:

Tab. 3 Zestawienie typów drzewostanu i ramowych składów odnowień

| TSL   | TD       | Orientacyjny skład gatunkowy [%] | Gatunki domieszkowe [%]              |

Js - ze względu na masowe występowanie zespołu chorobowego zamierania jesionu można zastępować w składzie gatunkowym jesion Ol, Db, Św, Wz, Brz, Jw.

Na powierzchniach zagrożonych przez pędraki dopuszcza się odnowienia z gatunków lekkonasiennych na wszystkich siedliskach.

Dopuszcza się w odnowieniach zastępowanie gatunków wymienionych w powyższej tabeli innymi cennymi gatunkami rodzimymi odpowiednimi dla danego siedliska.

Dopuszcza się różnice do 20% w powyższych orientacyjnych składach gatunkowych, zwłaszcza na korzyść gatunków liściastych.

Dopuszcza się stosowanie innych TD od wymienionych w tabeli w przypadku gdy w terenie zostanie stwierdzony inny model drzewostanu odpowiedni dla siedliska.

Niewielkie powierzchnie można odnawiać jednym gatunkiem, odpowiednim do siedliska.

Materiał używany do zalesień i odnowień powinien spełniać wymogi Ustawy z dnia 7 czerwca 2001 roku o leśnym materiale rozmnożeniowym (Dz. U. z 2019 r. poz. 1097).

Zestawienie sumarycznej powierzchni typów siedliskowych lasu (TSL):

## 1.5 Mięszność dopuszczalna do pozyskania

Określone Rozporządzeniem Ministra Środowiska z dnia 12 listopada 2012 r. w sprawie szczegółowych warunków i trybu sporządzania planu urządzenia lasu, uproszczonego planu urządzenia lasu oraz inwentaryzacji stanu lasu (Dz. U. 2012 poz. 1302) minimalne wieki wyrębu wynoszą:

| Gatunek | Wiek rębności | Gatunek | Wiek rębności | Gatunek | Wiek rębności | Gatunek | Wiek rębności |
|---------|---------------|---------|---------------|---------|---------------|---------|---------------|
| SO      | 80            | BRZ     | 60            | DG      | 80            | JRZ     | 40            |
| SO.B    | 80            | BRZ.O   | 60            | BK      | 100           | AK      | 60            |

### 1.5.1 Maksymalne miąższości do pozyskania w użytkowaniu rębnym

Na podstawie wyżej określonych minimalnych wieków wyrębu obliczono etaty oraz określono maksymalną miąższość do pozyskania w użytkowaniu rębnym. Maksymalny etat został wyliczony zgodnie z załącznikiem 5 zarządzenia DGLP nr 37 z 2020 r. punkt 3.1.6.1

Tab. 4 Etaty rębne

| Etat z ostatniej klasy wieku | Etat z 2-ch ostatnich klas wieku | Etat wg potrzeb hodowlanych z uwzględnieniem przebudowy drzewostanu | Etat przyjęty | Pozostałe użytki rębne nieobjęte etatem | Maksymalna miąższość możliwa do pozysk. w użytk. rębnym (kol.4+kol.5) |
|------------------------------|----------------------------------|---------------------------------------------------------------------|---------------|-----------------------------------------|-----------------------------------------------------------------------|
| m <sup>3</sup> brutto        |                                  |                                                                     |               |                                         |                                                                       |
| 1                            | 2                                | 3                                                                   | 4             | 5                                       | 6                                                                     |
| 85420                        | 83430                            | 30283                                                               | 83430         | 67                                      | 83497                                                                 |

### 1.5.2 Maksymalne miąższości do pozyskania w użytkowaniu przedrębnym

W użytkowaniu przedrębnym przewiduje się pozyskanie w wysokości

- **35183 m<sup>3</sup>** grubizny brutto
- **30828 m<sup>3</sup>** grubizny netto

na powierzchni **590,1407 ha**.

Wielkość ta wynika z sumy masy i powierzchni wskazań gospodarczych konkretnych drzewostanów projektowanych do zabiegów pielęgnacyjnych (CP-P, TW, TP) i stanowi orientacyjną wielkość miąższości wynikającą z właściwie wykonanych zabiegów hodowlanych na przewidzianej do tych zabiegów powierzchni. W uzasadnionych przypadkach, wynikających z potrzeb hodowli i użytkowania lasu oraz innych aspektów przyrodniczych, możliwe jest zwiększenie wskaźników intensywności użytkowania przedrębnego („Wytyczne do sporządzania projektów uproszczonych planów urządzenia lasu”, rozdział 3.1.6.2 „Zasady ustalania orientacyjnej miąższości możliwej do pozyskania w użytkowaniu przedrębnym”) wykazanego w niniejszym opracowaniu do wielkości nieprzekraczającej 20% miąższości drzewostanu (pododdziału) wskazanej w uproszczonym planie urządzenia lasu.

Nie należy pozostawiać drzewostanu bez zabiegów rębnych, gdyż w dłuższej perspektywie prowadzi to do deprecjacji surowca drzewnego, powodując wymierne straty, szczególnie w miejscach o podwyższonej wilgotności gleby. Ponadto pozostawienie zbyt silnego zwarcia prowadzi do zamierania młodych pokoleń rozwijających się w dnie lasu i utrudnia stworzenie dogodnych warunków dla odnowienia naturalnego. Wobec tego, w miejscach, gdzie młode pokolenie występuje na dużej powierzchni, należy prowadzić bardziej intensywne cięcia.

Nie należy poprzez cięcia prowadzić do zbytniego rozświetlenia dna lasu, w przypadku, gdy nie rozwija się jeszcze młode pokolenie. Zbytnie rozświetlenie dna lasu doprowadzić może do zadarnienia lub silnego zachwaszczenia utrudniając tym samym rozwój nalotów i podrostów, co przełoży się to w przyszłości na znaczny wysiłek w wyprowadzeniu dobrego jakościowo młodnika i następnie drzewostanu.

W miejscach z zaplanowanym usuwaniem przestojów zaleca się pozostawienie części z nich w charakterze nasienników i ochrony młodych drzew. Należy jednak starannie selekcjonować takie drzewa, by były w dobrej kondycji i wolne od chorób i owadów.

Cięcia sanitarne (CS) – zabieg mający na celu usunięcie martwych, chorych drzew w celu nie dopuszczania do tworzenia się ognisk chorobowych oraz powiększania się luk lub tworzenia się niepożądanych przerw w zwarcu. Zabieg ma na celu ochronę drzewostanu przed rozpadem oraz jak najdłuższego utrzymania powierzchni leśnej zalesionej w danym wydzieleniu.

W wydzieleniach, gdzie zanotowano stosunkowo duży udział martwego drewna tj. drzew martwych, zamierających i atakowanych przez owady (wydzielający się posusz) prowadzić cięcia sanitarne przekraczające wyznaczony etat (martwe drewno nie zaliczono do etatu w użytkowaniu rębny i przedrębny). W celu nie doprowadzenia do wylesienia tych wydzieli należy eliminować ogniska grzybowe i owadzie.

W przypadku wyliczenia zbyt niskiego etatu pozyskania na pojedynczej działce (brak równomierności rozłożenia masy w wydzieleniu np. przestoje lub opisane gatunki, jako „miejscami” (MJS) ze starszych klas wieku) decyzje o pozyskaniu podejmuje organ nadzorujący. W takich przypadkach dopuszcza się pozyskanie większe od wyliczonego matematycznie przy założeniach racjonalnej i zrównoważonej gospodarki leśnej. Na przykład, przy opisanym d-stanie w III kl wieku i działce 0,01 ha etat jest niski (wynosi na 10 lat 1 m<sup>3</sup>), ale na działce tej rosną dwie Jd 120 I o łącznej masie 6m<sup>3</sup>. W takim przypadku dopuszcza się ich pozyskanie i przekroczenie zaplanowanego etatu dla działki.

Jednocześnie zwraca się uwagę, że planowany etat jest maksymalnym do pozyskania na cały okres obowiązywania planu, stanowi wskazówkę, a nie wytyczną w planowaniu. Tym samym rozumie się przez to brak konieczności wykonywania etatu pozyskania, jako całości, jak również w poszczególnych wydzieleniach. Decyzja o pozyskaniu masy należy do władającego gruntem i tym samym w przypadku stwierdzenia braku potrzeby pozyskania wyliczonej masy z wydzielenia nie ma takiego obowiązku. Właściciel może pozostawić zapas na kolejny okres gospodarczy.

**Tab. 5 Miąższość drzewostanów zaprojektowanych do użytkowania przedrębnego**

| Miąższość drzewostanów projektowanych do użytkowania przedrębnego | Spodziewany przyrost bieżący | Miąższość planowana do pozyskania | Stosunek procentowy (3:1)*100 | Stosunek procentowy (3:2)*100 |
|-------------------------------------------------------------------|------------------------------|-----------------------------------|-------------------------------|-------------------------------|
| m3 grubizny brutto                                                |                              |                                   | %                             |                               |

| 251009                                                            | 71504,2                      | 35183                             | 14,02                         | 49,2                          |

## 1.6 Hodowla lasu

W przypadku zaplanowania w rębniach odnowienia w odpowiednim procencie, powierzchnie te można pozostawiać do naturalnego odnowienia. W przypadku problemów z uzyskaniem odnowienia naturalnego można zastosować odnowienie sztuczne. Rębnie kierunkować na odnowienie naturalne. W przypadku opisanych powierzchni jako halizy i płazowiny nadać pilość w wyonaniu zabiegu zgodnie z art. 13 ust 2 ustawy o lasach.

## 1.7 Ochrona lasu

### 1.7.1 Podział lasów na kategorie ochronności

W obrębie objętym opracowaniem nie występują lasy ochronne.

Jednocześnie część lasów będących przedmiotem opracowania spełnia kryteria art. 15 ustawy o lasach do uznania za ochronne.

W przypadku uznania przyszłości lasów za ochronne w osobnej procedurze nie ma potrzeby ustalania szczególnych sposobów prowadzenia gospodarki leśnej o których mowa § 4 rozporządzenia Ministra Ochrony Środowiska, Zasobów Naturalnych i Leśnictwa z dnia 25 sierpnia 1992 r. w sprawie szczegółowych zasad i trybu uznawania lasów za ochronne oraz szczegółowych zasad prowadzenia w nich gospodarki leśnej.

### 1.7.2 Stan sanitarny

Stan zdrowotny drzewostanów z nielicznymi wyjątkami przedstawia się dobrze. Największym zagrożeniem dla drzewostanów są gradacje owadzie, jemiola i kłęski klimatyczne.

W przypadku pewnych różnic pomiędzy istniejącym składem gatunkowym a założonym należy, w miarę możliwości dążyć do ich dostosowania do przyjętego TD.

### 1.7.3 Ochrona przyrody

Zinwentaryzowane gatunki fauny zostały wpisane w sekcji „informacje różne”, flory na stronie 2 opisu taksacyjnego – w bazie danych.

**Zadania z zakresu gospodarki leśnej zostały zaprojektowane tak aby ich realizacja była zgodna z ustanowionym planem zadań ochronnych dla poszczególnych form ochrony przyrody.**

Wytyczne do wykonania zabiegów:

Na wszystkich terenach prace leśne prowadzić w sposób zapewniający jak najmniejszy uszczerbek w gatunkach chronionych stwierdzonych w poszczególnych wydzieleniach. Pozostawiać drzewa z gniazdami, dziuplaste zasiedlone itd.

Przy prowadzeniu prac leśnych, gdy zachodzi potrzeba wyznaczania szlaków zrywkowych udostępniających las, wyznaczać je w taki sposób, który spowoduje przemyślane poruszanie się po drzewostanie, ograniczając niszczenie gleby, roślin runa i kaleczenie drzew. Ważnym jest, aby po zakończeniu prac szlaki zrywkowe zabezpieczyć przed erozją gruntu i przekształcaniem w rynny odprowadzające wodę.

Zaleca się, aby podczas prac z zakresu pozyskania drewna zwracać uwagę na ochronę naturalnego odnowienia, pozostawiać drzewa z gniazdami ptaków wraz z osłoną drzewostanu o pow. 0,02 ha. Zaleca się również w wydzieleniach, w których stwierdzono występowanie roślin chronionych, w celu ochrony płatów roślin, wykonanie zabiegów gospodarczych na początku lub końcu okresu wegetacyjnego, najlepiej przy pełnej pokrywie śnieżnej. Należy również zachować różnorodność i bogactwo krajobrazu poprzez pozostawienie w stanie nienaruszonym śródleśnych łąk, polan czy różnego rodzaju nieużytków będących często ostoją chronionych gatunków roślin i miejscem bytowania zwierząt.

W celu ochrony organizmów związanych z martwym drewnem należy wskazać na systematyczne pozostawianie w lesie martwych drzew, które są środowiskiem życia tych organizmów, w ilości, niepowodującej narażania drzewostanów na opanowanie przez szkodniki wtórne lub choroby grzybowe. Pozostawianie rozkładającego się drewna wpłynie dodatnio na intensyfikację ochrony różnorodności biologicznej w ekosystemach leśnych.

Realizując zadania gospodarcze należy kierować się zasadą trwałości lasu oraz uwzględniać funkcje ochronne. Ważne jest też realizowanie zadań gospodarczych w sposób mało uciążliwy dla ekotopu i biocenozy leśnej.

Szczególny nacisk położyć trzeba na utrzymanie wszystkich funkcji spełnianych przez las oraz poprawienie biologicznej różnorodności lasów, a co za tym idzie zwiększenie ich naturalnej odporności na możliwość powstania szkód biotycznych i abiotycznych. Ten cel można osiągnąć między innymi przez:

- Pozostawianie w lasach drzew o imponujących wymiarach,
- Utrzymanie stałego pokrycia roślinnością leśną w celu utrzymywania stałych korytarzy migracji,
- Nie ingerowanie w małe zbiorniki, ciekі wodne i tereny źródliskowe, pozostawianie wzdłuż zbiorników, cieków wodnych i na terenach źródliskowych rosnącej tam roślinności drzewiastej; w przypadku powstania wylesienia teren taki należy w krótkim czasie odnowić,
- Pozostawianie występujących w lesie naturalnych nieużytków takich jak bagna, mszary, torfowiska, itp. wraz z fauną i florą,
- Dostosowanie składu gatunkowego odnowień do lokalnych warunków mikrosiedliskowych,
- Zaniechanie, przy realizacji cięć pielęgnacyjnych, stosowania cięć schematycznych; należy tworzyć rozmieszczone nierównomiernie biogrupy drzew stabilizujące drzewostan,
- Odnowienia i podsadzenia należy prowadzić pod kątem dostosowania składu gatunkowego młodego pokolenia do potencjalnych możliwości produkcyjnych siedlisk,
- Nie prowadzenie melioracji wodnych w sposób grożący wysuszeniem naturalnych terenów,
- Zachować drzewa dziuplaste i martwe w celu ochrony miejsc lęgowych dzięciołów,
- Dążyć do pozostawienia od 3-5 martwych drzew na 1 ha uwzględniając stan sanitarny lasu,
- W okolicach źródlisk, jezior, rzek zaleca się zachowanie stref ekotonu bez cięć zupełnych o szerokości min. 25 m,
- **Właściwy termin realizacji planu pozyskania użytków rębnych i przedrębnych przypada na okres od 16 października do końca lutego, czyli poza pełnią okresu lęgowego ptaków.** Podczas pozyskania użytków rębnych i przedrębnych należy również pozostawić drzewa zasiedlone przez ptaki i inne zwierzęta tak, aby nie naruszyć zakazów, o których mowa w art. 52 ust. 1 pkt 1-3, 7, 8 i 13 ustawy o ochronie przyrody, **(to jest umyślnego zabijania, umyślnego okaleczania, umyślnego niszczenia ich jaj, postaci młodocianych lub form rozwojowych, niszczenia siedlisk lub ostoi, niszczenia, usuwania lub uszkodzania gniazd, umyślnego płoszenia lub niepokożenia w okresie lęgowym).**
- Na siedliskach wilgotnych i podmokłych zrywkę drewna prowadzić w sposób minimalizujący naruszenie warstwy próchnicznej gleby, a w okresie zimowym przy pokrywie śnieżnej,
- Pozostawiać fragmenty drzewostanu (biogrup) z bogatszymi stanowiskami chronionych, rzadkich i zagrożonych gatunków.

**We wszystkich pracach prowadzonych w oparciu o UPUL stosować zapisy Rozporządzenia Ministra Klimatu i Środowiska z dnia 27 marca 2023 r. w sprawie wymagań dobrej praktyki w zakresie gospodarki leśnej (Dz.U. z 2023 r., poz. 672).**

We wszystkich pracach stosować zapisy ustawy z dnia 16 kwietnia 2004 r. o ochronie przyrody (Dz. U. z 2024 r., poz. 1478 ze zm.) w zakresie zakazów i ograniczeń co do ochrony gatunkowej, a także w stosunku do pomników przyrody występujących na gruntach ujętych w pUPUL bądź ich sąsiedztwie z uwzględnieniem art. 52 ust 5, który wskazuje, że odstępstwo od zakazu, o którym mowa w ust. 2 pkt 10, nie dotyczy gatunków wymienionych w załączniku IV dyrektywy Rady 92/43/EWG z dnia 21 maja 1992 r. w sprawie ochrony siedlisk przyrodniczych oraz dzikiej fauny i flory, a także chronionych gatunków ptaków.

**Tab. 7 Zestawienie walorów przyrodniczych urządzanego obiektu**

| Rodzaj obiektu                                                   | Liczba | Powierzchnia całkowita [ha] | Powierzchnia w zasięgu urządzanego obiektu [ha] | W tym |     |                 |     |
|------------------------------------------------------------------|--------|-----------------------------|-------------------------------------------------|-------|-----|-----------------|-----|

| Gatunki zinwentaryzowanych roślin (w tym chronionych i rzadkich) | 0      |                             |                                                 |       |     |                 |     |

#### 1.7.4 Ochrona przeciwpożarowa

W zakresie ochrony przeciwpożarowej obowiązki właścicieli lasów określa:

- Ustawa o lasach z dnia 28 września 1991 roku (t.j. Dz. U. z 2025 r. poz. 567)
- Ustawa o ochronie przeciwpożarowej z dnia 24 sierpnia 1991 roku (t.j. Dz. U. z 2025 r., poz. 188) i wydanymi na ich podstawie przepisami wykonawczymi:
  - Rozporządzenie Ministra Spraw Wewnętrznych i Administracji z dnia 7 czerwca 2010 r. w sprawie ochrony przeciwpożarowej budynków, innych obiektów budowlanych i terenów (Dz. U. 2023 r, poz. 822 z późniejszymi zmianami)
  - Rozporządzenie Ministra Spraw Wewnętrznych i Administracji z dnia 11 stycznia 2019 r. ( Dz.U. 2019 poz.67) zmieniające rozporządzenie w sprawie ochrony przeciwpożarowej budynków, innych obiektów budowlanych i terenów
  - Rozporządzenie Ministra Środowiska z dnia 22 marca 2006 r. (t.j. Dz. U. 2022 r., poz. 1065) w sprawie szczegółowych zasad zabezpieczania przeciwpożarowego lasów

Z uwagi na fakt, że lasy w zarządzie właściwego terytorialnie Nadleśnictwa oraz lasy będące przedmiotem opracowania sąsiadują ze sobą, bądź są oddalone o kilkaset metrów wszelkie dane odnośnie zagrożenia pożarowego, jak również sposobu postępowania na wypadek pożaru są analogiczne.

Lasy właściwego terytorialnie Nadleśnictwa zaliczone zostały do III kategorii zagrożenia pożarowego, w związku z powyższym taką samą kategorię zagrożenia pożarowego posiadają lasy będące przedmiotem opracowania. Działania prewencyjne i ochronne w nadleśnictwach odnośnie zabezpieczenia przeciwpożarowego z uwagi na sąsiedztwo obejmują wszystkie lasy bez względu na własność. Wyposażenie techniczne i logistyczne nadleśnictw wykorzystywane jest również do wczesnego wykrywania i likwidowania pożarów w lasach innej własności.

#### 1.8 Zawartość UPUL

W skład uproszczonego planu urządzenia lasu wchodzi następujące części:

1. Opis ogólny
2. Uzgodnienia
3. Zestawienie powierzchni i miąższości gatunków panujących w klasach i podklasach wieku według głównych funkcji lasu
4. Zestawienie powierzchni i miąższości gatunków panujących (głównych) w typach siedliskowych lasu według klas i podklas wieku

5. Opisy taksacyjne lasu
6. Zestawienie zadań gospodarczych
7. Wykaz powierzchni niezalesionych
8. Rejestr działek leśnych i wskazania gospodarcze w zakresie gospodarki leśnej
9. Zestawienie gruntów związanych z gospodarką leśną
10. Zestawienie powierzchni lasu na nieleśnych użytkach gruntowych
11. Wykaz gruntów do zalesienia
12. Wykaz właścicieli
13. Wykaz działek
14. Wykaz rozbieżności
15. Wykaz skrótów i symboli oraz słownik podstawowych pojęć leśnych
16. Mapa przeglądowa
17. Mapa gospodarcza lasu

Załącznikiem do uproszczonego planu urządzenia lasu są zadania w zakresie gospodarki leśnej, z przeznaczeniem dla właścicieli lasu.

Uproszczony plan urządzenia lasu sporządzono w 3 egzemplarzach w wersji analogowej. Sporządzono jedną kopię bazy danych. Mapy wykonano w wersji cyfrowej oraz analogowej.
